

deepsleep

MIND THE GAP!

You must cover the gap and floor bolts between the back seat and rear cargo area to avoid any damage to your new deepsleep.

Your mattress fits in the bag with a pump comfortably when folded in sections from the bottom to the top, then rolled compactly towards the air valve.

This has a 2 way air tight valve. Open the first plug to inflate - open the second part of plug to let air out.

If you are sleeping in a climate that gets cooler at night: Your mattress is NOT losing air. A cooler temperature will cause the air in your mattress to contract. Simply refill to your desired level and continue the good times...

Don't put a baby to sleep on this mattress. Infants can suffocate on inflatable mattresses. Seriously.

deepsleep is durable, but if you travel with dogs we recommend you still use a blanket or added layer of protection to ensure the safety and longevity of your air mattress.

Please read warning label before use.
